## FIRST SEMESTER (CBCSS-UG) DEGREE EXAMINATION, NOVEMBER 2021

Physics/Applied Physics

PHY 1C 01-PROPERTIES OF MATTER AND THERMODYNAMICS

(2021 Admissions)

Time : Two Hours

Maximum : 60 Marks

The symbols used in this question paper have their usual meanings.

## Section A (Short Answer Type)

Answer at least **eight** questions. Each question carries 3 marks. All questions can be attended. Overall Ceiling 24.

- 1. What do you mean by modulus of rigidity ? Give an expression for the work done per unit volume when a body undergoes a strain.
- 2. Write down the relation connecting Young's modulus, Bulk modulus and rigidity modulus.
- 3. Draw a diagram to illustrate the terms angle of twist and angle of shear.
- 4. What are the two forces that govern the shape of a liquid drop ? Why a smaller drop assumes spherical shape ?
- 5. What do you mean by a viscous force ?
- 6. What are the basic assumptions used while arriving at the Poiseuille's formula ?
- 7. What is Brownian motion ?
- 8. What are the essential conditions for a process to be reversible ?
- 9. What are the basic processes in a Carnot's cycle?
- 10. Give Clausius statement of the second law of thermodynamics.
- 11. Explain the principle of increase of entropy.
- 12. Explain the Clausius-Clapeyron equation.

 $(8 \times 3 = 24 \text{ marks})$ 

## Section B (Paragraph/Problem Type)

Answer at least **five** questions. Each question carries 5 marks. All questions can be attended. Overall Ceiling 25.

13. A bar of width 2.5 cm and thickness 2.5 mm is supported symmetrically on two knife edges kept 1 m apart. When the bar is loaded with weight 200 g at each end, projected 10 cm from the knife edges, the centre is elevated by 4 mm. Estimate the Young's modulus of the material of the bar.

**Turn over** 

- 14. Water flows through a pipe of radius 0.04 m and length 2 km at the rate of 100 litres/min. If the co-efficient of viscosity of water is  $10^{-3}$  Nsm<sup>-2</sup> and the atmospheric pressure is  $1.01 \times 10^{5}$  Pa, determine the pressure required to maintain the flow.
- 15. What is the pressure inside a drop of a liquid of radius 3 mm at room temperature, if the surface tension of the liquid at room temperature is 0.465 N/m ?
- 16. A carnot engine working between 300 K and 600 K has a work output of 800 J per cycle. Determine the amount of heat energy supplied to the engine from the source per cycle.
- 17. lg of water at 100°C is boiled at a pressure of 1 atm to steam at the same temperature. If the specific latent heat of steam is  $226 \times 10^4$  J/kg and the specific volume of water and steam at 100°C are 1 cm<sup>3</sup>/g and 1671 cm<sup>3</sup>/g, determine the work done and increase in internal energy in the process.
- 18. Prove that the slope of an adiabatic is  $\gamma$  times the slope of the isothermal, where  $\gamma$  is the ratio of the specific heat capacities at constant pressure and constant volume.
- 19. Discuss the working principle of a Carnot's refrigerator.

 $(5 \times 5 = 25 \text{ marks})$ 

## Section C (Essay Type)

Answer any **one** question. The question carries 11 marks.

- 20. Obtain an expression for the bending moment of a beam.
- 21. Explain the term entropy. Obtain an expression for the change of entropy in a reversible isothermal process.

 $(1 \times 11 = 11 \text{ marks})$
