Reg. No.....

### FIRST SEMESTER M.Sc. DEGREE (REGULAR/SUPPLEMENTARY) EXAMINATION, NOVEMBER 2021

(CBCSS)

Physics

### PHY IC 02-MATHEMATICAL PHYSICS-1

(2019 Admission onwards)

Time : Three Hours

Maximum : 30 Weightage

#### **General Instructions**

- 1. In cases where choices are provided, students can attend **all** questions in each section.
- 2. The minimum number of questions to be attended from the Section / Part shall remain the same.
- 3. The instruction if any, to attend a minimum number of questions from each sub section/sub part/ sub division may be ignored.
- 4. There will be an overall ceiling for each Section / Part that is equivalent to the maximum weightage of the Section / Part.

#### Section A

8 Short questions answerable within 7½ minutes. Answer **all** questions, each carry weightage 1.

1. If V represents a vector derive the curl of V in orthogonal curvilinear coordinates.

2. Is the given matrix Hermitian 
$$\begin{bmatrix} 1 & -i & -3i \\ i & 5 & 0 \\ 3i & 0 & 2 \end{bmatrix}$$
.

- 3. Explain concept of outer product in tensors.
- 4. With an example explain features of a hyperbolic partial differential equation.

5. Show that 
$$\int_{-1}^{+1} x P_n(x) p_{n-1}(x) dx = \frac{2n}{4n^2 - 1}$$
.

Turn over

# 143984

D 13158

 $\mathbf{2}$ 

- 6. Explain the convolution theorem of Fourier transform.
- 7. Explain when can a second-order linear homogeneous differential equation can be called selfadjoint.
- 8. Distinguish between Fourier integral and Fourier transform.

 $(8 \times 1 = 8 \text{ weightage})$ 

#### Section B

4 essay questions answerable within 30 minutes. Answer any **two** questions, each carry weightage 5.

- 9. What are orthogonal curvilinear co-ordinate systems ? Obtain the mathematical expression for divergence in terms of curvilinear coordinates.
- 10. Using appropriate differential equation explain Laguerre polynomials and associated Laguerre polynomials. Obtain their representation in series form.
- 11. Explain the following properties of Fourier series: (1) Convergence (2) Integration ; and
  (3) Differentiation. Obtain the sine and cosine series in the interval (0, π) for a function f(x).
- 12. Explain the Frobenius' method of finding solution to homogenous differential equation of second order.

 $(2 \times 5 = 10 \text{ weightage})$ 

#### Section C

7 problems answerable within 15 minutes. Answer any **four** questions, each carry weightage 3.

		0	1	0	
13.	Is the given matrix orthogonal	1	0	0	
		0	0	1	

D 13158

- 14. Prove that  $P_{2m+1}(0) = 0$ .
- 15. A string of length n is stretched until the wave speed is 40 m/sec. It is given an initial velocity of 4 sin (x) from its initial position. What is location of maximum displacement ?
- 16. Evaluate  $\Gamma\left(-\frac{1}{2}\right)$ .
- 17. Evaluate Laplace transform of  $\frac{\cos\sqrt{t}}{\sqrt{t}}$ .
- 18. Prove that  $H_{2n}(0) = (-1)^n \frac{(2n)!}{n!}$ .
- 19. Expand the function  $f(x) = \sin x$  as a cosine series in the interval  $(0, \pi)$

 $(4 \times 3 = 12 \text{ weightage})$
